

International Day of Women and Girls in Science

Organized by

Club Botanica

Department of Botany

February 11, 2023

The International Day of Women and Girls in Science (IDWGIS) is celebrated on 11th February every year. It was first started by United Nations to give women and girls full and equal access to and participation in science thereby helping in achieving gender equality and the empowerment of women and girls. The theme of IDWGIS for the year 2023 is “Innovate, Demonstrate, Elevate, Advance, Sustain” which aims to connect the Sustainable Development Goals (SDGs) to the role of women and girls in science. This day allows us to recognize the impact women and girls make in the field of STEM (Science, Technology, Engineering, and Mathematics) careers.

The celebrations began with the teachers of Botany Department narrating about the significance of the day. The teachers also gave their valuable comments about the occasion. We, the students also got a chance to speak about our individual point of view regarding the day. Everyone got a new perspective about the day’s importance.

The day ended in a beautiful note where all the students and teachers from our department gathered for a photo session.
