# Course Structure

## About the course

This course will introduce you to the realm of web design. The first and necessary step for that goal is to understand how HTML works, and then we will proceed to more advanced and complicated structures and concepts of web design, such as CSS and layout control. A series of tasks (website evaluation, website development, reflective report, collaborative website development, website self-assessment), as well as several group activities (discussions, online resource sharing, collaborative work) will help you gain practical experience on web development and a thorough understanding of web design issues.

Module one covers the overview of HTML, how to use image and structuring your content using tables and list. You will also be learning how to link multiple web pages in a website and creating a form to take input from the user.

The second module covers the introduction of CSS on how to set up CSS file in your page. You will learn how to style your tables your forms and different elements learned in module one.

The third module covers the technical aspect on how to deploy your web application in the internet for users to be able to access your website from anywhere in the world.

## Learning Outcome

This course aims to build in the students a web designing using HTML & CSS and imparting the skills needed in developing web applications.

On successful completion of this course students will be able to:

1. Describe and define web programming structure.
2. Extend one knowledge in web application development.
3. Obtain new findings through experiment and demonstration.
4. Design and develop their own application which is tailored to their needs.
5. Create and formulate plans and solutions that will help solve problems.
6. Integrate the skills with the ability to access and decide self-selected criteria based on observation.

Session

Session	Topic	Pedagogy/text	Session Learning outcome
<b>Module 1: HTML</b>			
1	Introduction	PPT 1: slides 1 to 30	Student will understand the structure of HTML and learned the different elements of web design. <b>Learning outcome 1</b>
2	HTML Image	PPT 2: slides 1 to 28	How to structure the contents of html page <b>Learning outcome 2</b>
3	HTML Links	PPT 3: slides 1 to 45	Understand how to link one web pages to another. <b>Learning outcome 1</b>
4	HTML Forms	PPT 4: slides 1 to 19	Learn how to use forms to take input from the user in a web page. <b>Learning outcome 1</b>
5	HTML Layouts	PPT 5: slides 1 to 20 Discussion	Understand the usage of the different layouts in web development and find out the use of these components in real life application. <b>Learning outcome 3</b>

6	Practical	Assignment: build an application to take a text input and display the text on clicking of a button	Apply their knowledge in building their first application <b>Learning outcome 4</b>
<b>Module 2: CSS</b>			
7	CSS setup and Selectors	PPT 6: slides 1 to 34	How to setup css file in a web page and running application on browser. <b>Learning outcome 2</b>
8	Box model	PPT 7: slides 1 to 30	Understanding the layout and design through box model <b>Learning outcome 1</b>
9	Display and Positioning	PPT 8: slides 1 to 44	Learn the type of positioning method used for an element and how to apply them. <b>Learning outcome 2</b>
10	Colors and Typography	PPT 9: slides 1 to 37	Understand and applying styling to webpages in the form of colors and text. <b>Learning outcome 3</b>
11	Practical	Assignment: Apply styling to the assignment in session no 6	Apply their knowledge and enhance the previous version of web application build <b>Learning outcome 5</b>
<b>Module 3: Web Hosting</b>			
12	Web hosting	PPT 10: slides 1 to 30	Learn how host a web application online <b>Learning outcome 1</b>
13	Practical	Assignment: Deploy the application in 000webhosting	Apply their knowledge and decide on the type of hosting required to deploy their application. <b>Learning Outcome 6</b>
