

# World Water Day

**Organized by**  
**Club Botanica**  
**Department of Botany**  
**March 22, 2022**

World Water Day is on 22 March every year. It is an annual United Nations Observance that celebrates water and draws awareness to the 2 billion people who do not have access to safe water. It began in 1993. World Water Day's main goal is to motivate people to take action in order to achieve Sustainable Development Goal (SDG) 6: clean water and sanitation for all by 2030.

Mr. Johnfulmin Pohti, a non-teaching staff of the college was invited as a special guest by the Department of Botany on this day. And then began a few programmes, which comprised a few speeches given by 6th semester students and faculty present on that particular day. A few photo sessions with the teachers, non-teaching staff, and special guest were taken towards the end of the programme.

Later that evening, the 6th semester students conducted an online gathering for World Water Day, in which the 2<sup>nd</sup> and 4<sup>th</sup> semesters enthusiastically participated with enlightening lectures and presentations on the importance of water in our daily lives. With the help of all of the students from various semesters, as well as the teachers from the "Botany Department," the event was a success.
