

Report on student centric methods, such as experiential learning, participative learning and problem-solving methodologies are used for enhancing learning experiences

To make classrooms a more interactive place and friendly learning atmosphere and build an atmosphere of mutual support among peers the department have initiated several activities that will help students to learn better through and be more engaging and active not only in class but in their everyday life.

Experiential learning techniques such as class seminars and presentation are being conducted in the classroom where students are given a separate topic related to the current curriculum and have to prepare power point presentation and present it in the classroom, helping them to overcome stage fright and build confidence in public speaking and enhance their delivery mechanism in special lectures such as these.

Participative learning and group learning is another method that help enhance students learning experience especially during practical classes.
